DETAILED ACTION

Allowable Subject Matter

1. Claims 1-19 are allowable over the prior art of record.
2. The following is an examiner's statement of reasons for allowance

As per independent claims 1,9,18,19, the claim limitations pertaining to calculating a distance metric between cepstral covariance signature matrices, wherein the distance metric is defined by claims 1,18, or adjusting the sample matrix by adding a distortion matrix defined by the distance metrics, is not explicitly taught by the prior art of record.

With respect to the prior art of record, Netsch et al (5167004) teaches the concept of calculating covariance matrices for each speaker and associated word, performing a covariance matrix pooling, and cross referencing with a covariance matrix for each word (Fig. 9). Li (5995927) teaches computation of rotation matrices tied into the covariance matrix (Fig. 2). Chagnolletau ("Indexing telephone conversations.....analysis) teaches manipulation of cepstral coefficients in matrix format (pp 881-882). Brummer et al ("An Euclidean Distance Measure....Recognition) teaches various expressions for covariance matrices (pp. 168-169). Schmidt et al ("Covariance Estimation...Identification") teaches replacement of covariance calculation with correlations (pp. 335). However, none of the prior art references explicitly teach the claim limitations of the independent claims as

noted above. Furthermore, it would not have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of the prior art of record to obtain the recited claim limitations of the independent claims as noted above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
